PROTOCOL: Positive PCR COVID-19 test in an asymptomatic person who has had a COVID-19 infection in the past

For person who has been previously infected by COVID-19 and is showing no signs or symptoms, the following protocol must be followed to decide whether or not his/her accreditation to enter the ISU Bubble can be delivered.

1. This person must stay in quarantine in his/her hotel room for at least 48 hours, during which time another PCR test will be conducted. Further testing for antigens and/or antibodies, Cycle threshold (Ct) values, may also be required.

2. Check the medical status of this person, including previous PCR tests and any other COVID-19 tests/analysis (antigen/antibody tests), Ct values, medical reports, cardiac exams etc. from his/her physician. The onsite test result(s) will be compared to all other previous COVID-19 results provided.

3. The medical cell will review the onsite results and the person will be monitored for the development of any signs and symptoms.

4. In harmony with the measures of the national health authority in force, a decision will then be made whether the person may/may not be released from the quarantine and enter the competition Bubble.

Comments: This protocol can be amended at any time to comply with the local Health Regulations and/or include the latest medical knowledge.
